## **Lab04 - Class Diagram**

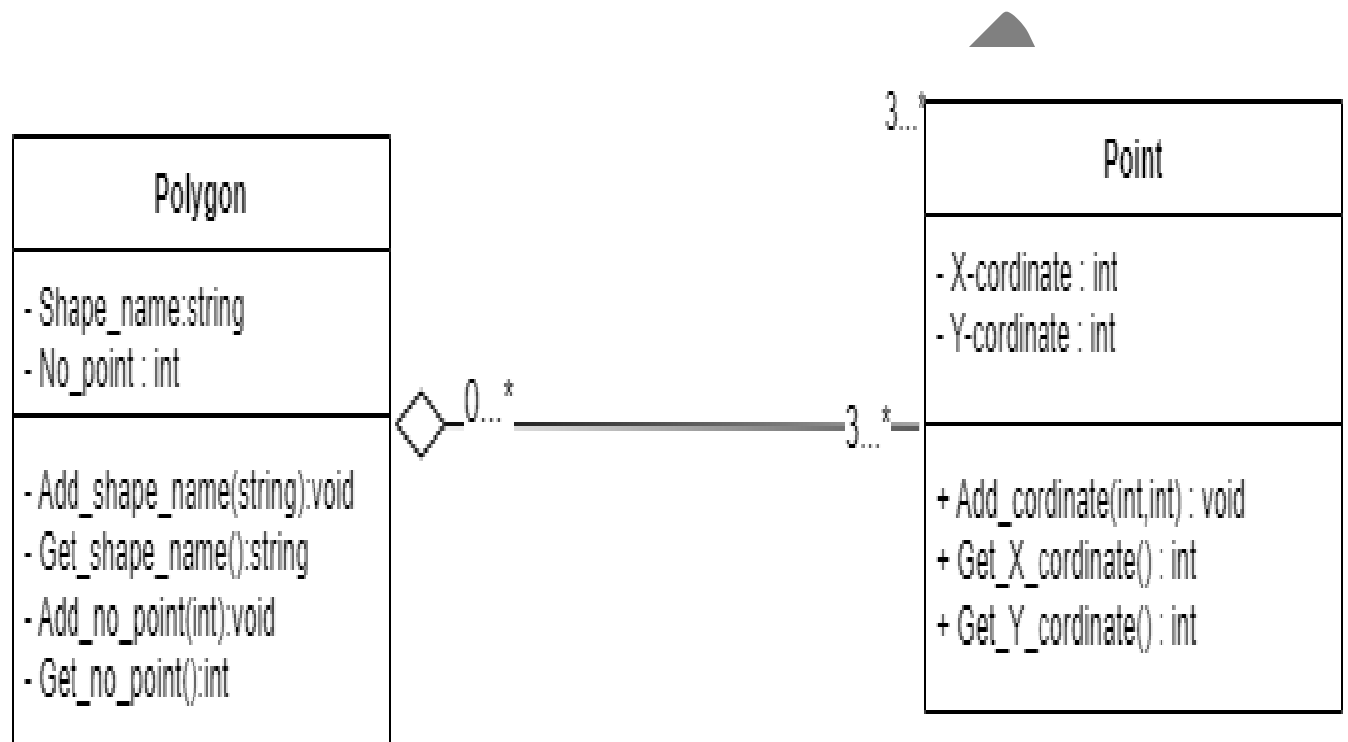

**Name : HEMAN CHAUHAN**

**Student ID : 202201267**

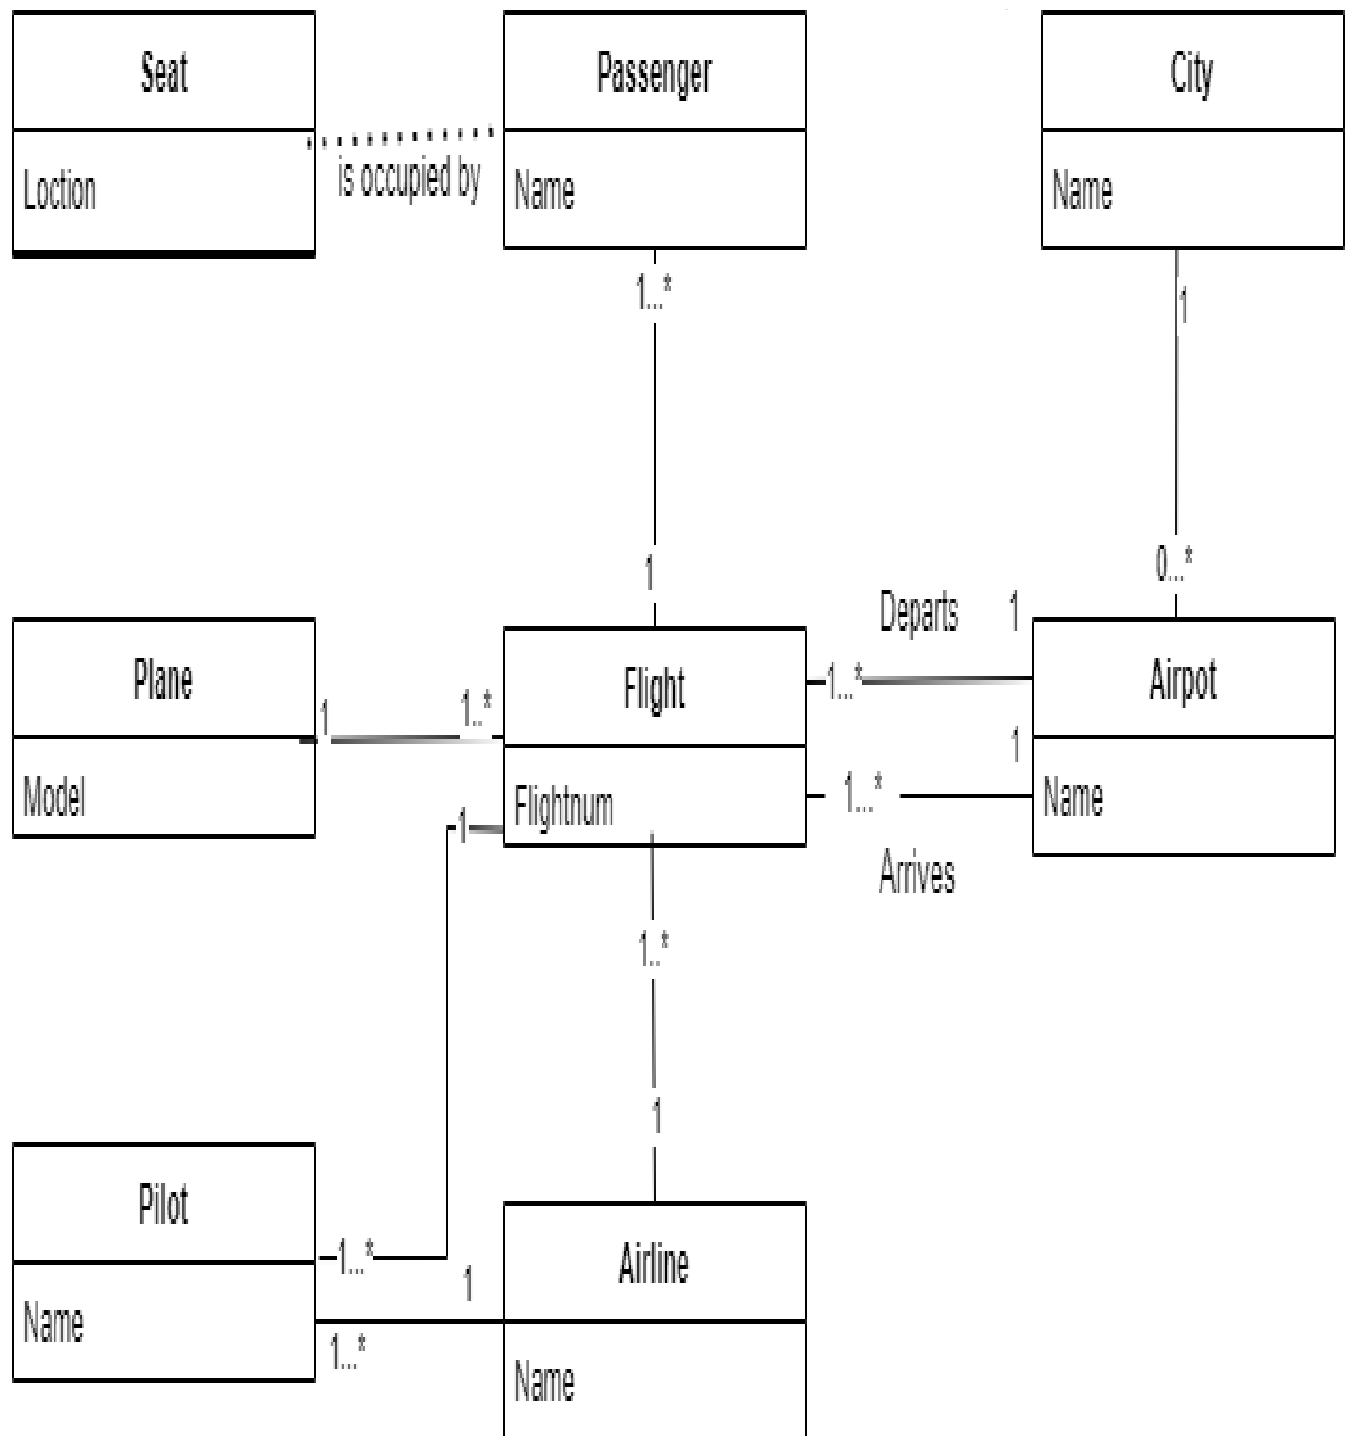

Q.1 Prepare a class diagram for the following object diagram that shows a portion of Europe.

**Q.2 Prepare a class diagram for the object diagram given in Figure -**  
**2. Explain your multiplicity decisions. What is the smallest number**  
**of points required to construct a polygon? Does it make a difference**  
**whether or not points may be shared between polygons? Your**  
**answer should address the fact that points are ordered.**

**Q.3 Figure 3 is a partially completed class diagram of an air transportation system. Add multiplicities in the diagram. Also add association names to unlevelled associations.**

**Q.4 We want to model a system for management of flights and pilots. An airline operates flights. Each airline has an ID. Each flight has an ID, a departure airport and an arrival airport: an airport as a unique identifier. Each flight has a pilot and a co-pilot, and it uses an aircraft of a certain type; a flight has also a departure time and an arrival time. An airline owns a set of aircrafts of different types. An aircraft can be in a working state or it can be under repair. In a particular moment an aircraft can be landed or airborne. A company has a set of pilots: each pilot has an experience level: 1 is minimum, 3 is maximum. A type of aeroplane may need a particular number of pilots, with a different role (e.g.: captain, co-pilot, navigator): there must be at least one captain and one co-pilot, and a captain must have a level 3.**
